## Virtual Inventory Configuration - Accept ALL Seller Lines

To simplify the maintenance of managing your virtual partner relationships, we have added a new virtual inventory feature “Accept ALL Seller Lines.”

This feature allows you to automatically accept all new and existing manufacturer lines enabled by your virtual Sellers and eliminates the need to manually monitor and activate lines.

Follow the instructions below to activate this feature:

1. Login to administration
2. Select Distributor Tools

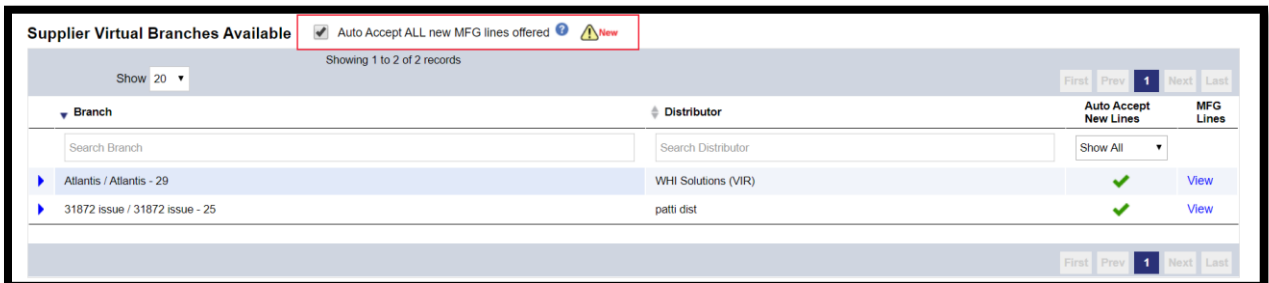

[Distributor Tools](#)

3. Select Virtual Inventory Configuration

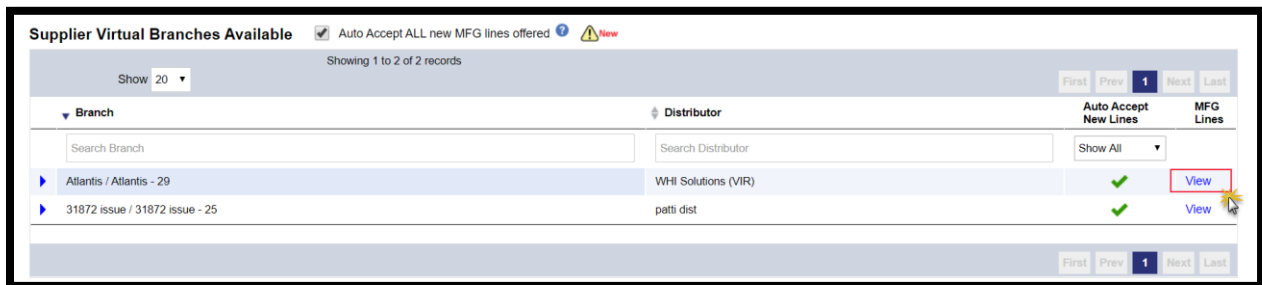

[Virtual Inventory Configuration](#)

4. Go to “Supplier Virtual Branches Available” and select “Auto Accept ALL new MFG lines.” This selection will be automatically applied to ALL of your virtual partner’s locations.

If you do not wish to automatically enable manufacturer lines for all of your virtual partner’s locations, you can select “View” in the MFG lines column inline next to the Seller location and assign a unique “Auto Accept ALL new MFG Lines” setting for any of the locations.

Within the Virtual Branch Configuration screen you can enable/disable the “Auto Accept ALL new MFG lines offered” for a specific location. This selection will override the “global” setting for this location.
